

## **Yokogawa Bridge Holdings Group Receives Order for Retractable Roof Drive System for Hong Kong's Kai Tak Sports Park**

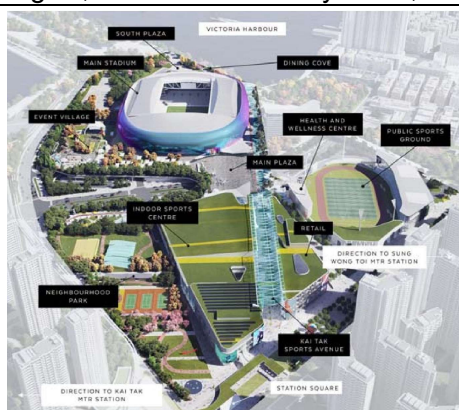

Yokogawa Bridge Holdings Corp. (TSE: 5911) today announced that the retractable roof technologies of subsidiary Yokogawa System Buildings Corp. ("YSC") have been selected for use in a large stadium to be built in Hong Kong. A contract for the production and installation of a retractable roof drive system has been concluded with Hong Kong's Kai Tak Sports Park Limited.

The Hong Kong Government is in the process of constructing the Kai Tak Sports Park on the site of the former Kai Tak Airport. Our involvement in the project centers on the drive system for the retractable roof of the main stadium that will be the sports park's core facility. The 50,000-seat stadium will feature a sound-damping retractable roof and a field that can be flexibly adapted for use by various sports codes, including soccer and rugby. The stadium will also be used as a venue for a wide range of entertainment and community events.

YSC's two core businesses are the Yokogawa Engineered Structure System (YESS) Business, and the Specialized Structure Business that centers on large movable structures, such as the stadium roof at Kai Tak Sports Park. Utilizing its comprehensive engineering expertise accumulated through extensive experience in a wide variety of fields, including building and bridge construction and electrical control systems, YSC has worked on large retractable roof projects in Japan and overseas, including for the Noevir Stadium Kobe and the Hong Kong Jockey Club. Under its corporate philosophy of "Contribution to society and the public and sound management", the Yokogawa Bridge Holdings Group will continue to contribute to communities in Japan and overseas through the provision of high-quality and safe societal infrastructure.
